

Amendments to the Claims

A complete listing of all claims in this application is set forth below.

1. (Currently amended) A method for managing documents for printing in a document management system comprising:

identifying pages within a document with a naming convention;
inputting data into a document management system using the naming convention, the data corresponding to the identified pages; and
specifying exception parameters for the identified pages.

2. (Currently amended) The method of claim 1, the identification of pages further comprising:

entering data corresponding to an imposition scheme for the document.

3. (Currently amended) The method of claim 2, the identification of pages further comprising:

entering data corresponding to a page designation.

4. (Original) The method of claim 3, the page designation further comprising:

designating pages with numerals; and
separating the numerals with white space characters.

5. (Original) The method of claim 4, the page numeral entry further comprising:
separating the page numerals with a range indicator.

6. (Currently amended) The method of claim 5, the page identification further comprising:

entering data corresponding to an even/odd designation for the page range indicated by the page numerals and range indicator.

7. (Original) The method of claim 1, the exception parameter specification further comprising:

specifying a device color profile for the identified pages.

8. (Original) The method of claim 1, the exception parameter specification further comprising:

specifying a trapping parameter for the identified pages.

9. (Original) The method of claim 1, the exception parameter specification further comprising:

specifying black overprinting parameters for the identified pages.

10. (Original) The method of claim 1, the exception parameter specification further comprising:

specifying anti-aliasing parameters for the identified pages.

11. (Original) The method of claim 1, the page identification further comprising:
including an imposition template identifier in the naming convention.

12. (Currently amended) A system for managing documents for printing in a document management system comprising:

an exception page selector for identifying pages within a document with a naming convention and for inputting data corresponding to the identified pages using the naming convention; and

an exception programmer for specifying exception parameters for the identified pages.

13. (Currently amended) The system of claim 12, the exception page selector including:

an input window for entering data corresponding to the naming convention.

14. (Original) The system of claim 12, the naming convention including:

an even/odd designator for the identified pages of the document.

15. (Original) The system of claim 12, the naming convention including:

an imposition template identifier.

16. (Original) The system of claim 12, the naming convention including:
page numerals separated by a range indicator.

17. (Original) The system of claim 16, the naming convention including:
an even/odd designator for the identified pages in the range.

18. (Original) The system of claim 12, the exception programmer further comprising:
a device color profile parameter that is correlated with the identified pages.

19. (Original) The system of claim 12, the exception programmer further comprising:
a trapping parameter that is correlated with the identified pages.

20. (Original) The system of claim 12, the exception programmer further comprising:
one of a black overprinting parameter and an anti-aliasing parameter that is correlated with the identified pages.
